

Purified Drinking Water

Purified water is usually tap or groundwater which has been treated to remove harmful substances like bacteria, fungi, and parasites. This means that **drinking it is pretty much guaranteed to be safe**. The college campus has Three UV RO enabled water filters installed at places to provide purified drinking water to students, teachers and staff of the college. The filters provide hot and cold water simultaneously. The Maintenance Committee regularly checks the functioning of water purifier and water cooler. Proper repair and replacement are done in order to ensure pure and safe drinking water for all. As a healthy practice only pure and fresh water is allowed for cooking in the College canteen.
