CIRCULAR

This is to inform all the faculties and students that we are organizing a Conference on Advances in pharmaceutical & health sciences to be held on 07th February to 10th February. Details of the class are furnished below kindly follow the schedule mentioned below. Class in charges shall make sure that students actively participate in the programme.

1. Title : Conference
2. Speaker: Mrs.Mallika
3. Date : 07/02/2022
4. Time : 10:00 am-01:30 pm
5. Venue : Seminar Hall

PRINCIPAL

M. Mallika
07/02/2022

Vision

To build nation's one among the best centers of excellence engaged in providing overall pharmaceutical Education including training and research. Bharat Institute of technology (Pharmacy) firmly believes that right knowledge and ethical responsibility drives individual commitment for the service of mankind.

Mission

M1: To bring students India's best education, as combination of teaching theory and practical application of knowledge and research in pharmaceutical sciences in order to train them to many positions of leadership and responsibility in pharmaceutical industry in academic and health care sector.

M2: To impart education, in a conducive ambience as comprehensive as possible, with the support of modern technologies and pedagogic tools and thereby develop in the students the abilities and passions to work wisely, creatively and effectively for the betterment of society.

M3: to impart a value based education, where the mind, body and the soul are holistically developed and major purpose of life is seen in the mankind and meeting the great challenges of the future.

(57) Abstract :

The present invention relates to novel method for the isolation of Alzheimer's Disease (AD) biomarkers from biological samples. The method integrates a multi-step extraction process, highly specific binding reagents (including monoclonal antibodies and aptamers), advanced separation techniques, automation, and quantitative analysis. It is specifically designed to enhance sensitivity, specificity, and reproducibility in the isolation of AD biomarkers, exemplified by amyloid-beta peptides and tau proteins. The method facilitates precise quantification and monitoring of these biomarkers, offering potential applications in early AD diagnosis, disease progression tracking, and therapeutic target identification. Moreover, it accommodates various sample types, including cerebrospinal fluid, blood, and tissue samples, underscoring its versatility and significance in advancing AD research and patient care.

(57) Abstract :

Preclinical evaluation of Fluvastatin for treatment of osteoporosis in ovariectomized rats. The albino Wistar female rats were divided into 4 groups of 6 rats in each and treated as follows. Group-I Sham operated receive vehicle (5% Tween 80); Group-II Ovariectomized control receives vehicle (5% Tween 80); Group-III Estrogen (0.0563mg/kg) in ovariectomized rats; Group-IV Fluvastatin (80mg/kg) in ovariectomized rats. At the end of 42 days, all the rats were deprived of food for whole night. On the next day, urine (0-24h) was collected, then the animals were anesthetized by Ketamine HCl (50mg/kg, ip) and blood samples were taken from common carotid artery. The significant increase in BMD, Ash content and lumbar hardness were observed. In addition, increased levels of calcium and phosphorus is decreased in OVX group and increased levels in Fluvastatin treated animals. The histopathological results also confirm the protective effect of drug. The present findings strongly suggest that Fluvastatin possess the potent antiosteoporosis activity in ovariectomized rats and substantiates the ethnic use in treatment of postmenopausal osteoporosis.

(57) Abstract :

The present invention provides a simple, accurate and precise method for the estimation of Fostemsavir in pharmaceutical dosage form. The present invention relates a method for the estimation of Fostemsavir by RP-UPLC in bulk and tablet dosage forms. The method for estimation of Fostemsavir in pharmaceutical dosage form, comprising of dissolving Fostemsavir using Acetonitrile and Potassium dihydrogen phosphate as mobile phase in the ratio of 80:40 %v/v; running chromatogram through column C18, 2.1mm x 50mm, 1.8µm using mobile phase; optimizing conditions of column at flow rate 0.3ml/min, detecting wavelength at 230 nm, injecting volume 1 µL, run time 5 min; and column temperature at 30°C; running the sample and recording chromatogram from the chromatograph for estimation of Fostemsavir. The method for estimation of Fostemsavir, wherein the retention time 1.186 min and relative standard deviation 0.2, relative standard deviation of repeatability precision of Fostemsavir 0.7. The method for estimation of Fostemsavir, wherein the recovery 99.28% and assay 99.11%. The method for estimation of Fostemsavir, wherein the developed method is simple and economical and can be adopted in regular quality control test in industries.

(57) Abstract :
UV SPECTROPHOTOMETRIC QUANTIFICATION OF CPM IN THE TABLET FORMULATION USING CHEMOMETRIC APPROACH ABSTRACT In recent research, the Quality by Design (QbD) chemometric approach was applied to establish and validate a robust, precise, and consistent spectrophotometric method for the quantification of Chlorpheniramine Maleate (CPM) in tablet formulations. A fractional factorial design (FFD) was used for the initial parameter assessment. Subsequently, the selected variables were subjected to a central composite design (CCD) for further evaluation and optimization of the method. Various statistical tools were employed to evaluate the compatibility of the collected data. CPM displayed peak absorption at 262 nm when interfaced with HCl. Critical method variables identified were slitwidth and sampling interval, which were further analyzed using CCD. Strong linearity was observed for CPM in the range of 2-12µg/mL with an R2 value exceeding 0.9995. The technique showed high accuracy, with an average % recovery exceeding 100%. After refining, the method was validated following ICH guidelines. By employing QbD principles, the spectrophotometric method inherently ensured quality. The final method was determined to be robust and suitable for quantifying CPM in pharmaceutical formulations.
